

4 User Stories

- 1. User Story (Linked to Issue 4): As a user, I would like to login in to my own account either as a student, a company or an admin in order to access personalized information. Issue #5**

This user story is about setting up the login page visually. There is also the backend aspect concerning cookies. As well, it is about bringing a user to their specific account whether admin, student or company which will all have slightly different UI specifics.

- 2. User Story (Linked to Issue 4): As a student, I would like to browse through the job postings to view all of the available jobs. Issue #6**

This user story is linked to creating the page related to viewing the list of available job positions, as well as each individual job posting page. Concerning back end, when a company goes to create a posting, setting up an immediate page for this posting and adding it to the available list of posting for student are certain necessary tasks to complete.

- 3. User Story (Linked to Issue 4): As an employer, I want to upload job postings so that students can view and apply to them. Issue #7**

This user story is linked to creating the page related to creating a job posting. This is the page the company sees when it wants to add a posting. There will be certain backend task related to this as well.

- 4. User Story (linked to issue #4): As an admin, I want to be able to oversee all user profiles and job postings (ex: add or modify job postings). Issue #8**

This user story relates to the creation of a user interface for admins (which is different from that of a student or employer). Certain backend tasks will need to be completed to provide admins the authority to manage user profiles and job postings.
